

What is claimed is:

1. Method for producing aromatic and/or enticing articles and parts thereof, comprising treating a material based on porous, thermoplastic plastic with at least one fish-luring aromatic and/or enticing substance.
2. Method according to claim 1, in which said material has an average pore size of less than 20 μm pore diameter.
3. Method according to claim 1, in which said material has an average pore size less than 3 μm pore diameter.
4. Method according to claim 1, in which said material has an average pore size less than 1.0 μm pore diameter.
5. Method according to claim 1 or 2, in which more than 50% of the pores of the material have a diameter of 0.5 μm or less.
6. Method according to claims 1 or 2, in which the void volume of the material is at least 50%.
7. Method according to claim 1 or 2, in which the plastic is selected from the group consisting of polyvinyl chloride and polyolefin.

8. Method according to claim 7, in which said material is comprised of 8 to 100 vol.% polyolefin with a molecular weight (weight average) of at least 300,000, a standard-load melt index of substantially 0, measured in accordance with ASTM-D-1278-57T (condition E), and a reduced viscosity of not less than 4.0, measured with a solution of 0.02 g of the polyolefin in 100 g of decalin at 130 °C, 0 to 92 vol.% filler and 0 to 40 vol.% plasticizer.
9. Method according to claim 8, in which said material is comprised of 15 to 60 vol.% polyolefin, 35 to 80 vol.% filler and 1 to 7 vol.% plasticizer.
10. Method according to claim 8, in which the polyolefin is ultra-high molecular weight polyethylene.
11. Method according to claims 8, wherein said filler is finely-divided silica.
12. Method according to claims 8, in which said plasticizer is process oil.
13. Method according to claim 1, further comprising adhering, welding, heat-shaping and/or printing said material before it is treated with said fish-luring aromatic and/or enticing substance.

14. Aromatic and/or enticing articles, comprising a porous, thermoplastic plastic treated with at least one fish-luring aromatic and/or enticing substance.

15. The aromatic and/or enticing articles of claim 14, wherein said plastic has an average pore size of less than 20 μm pore diameter.

16. The aromatic and/or enticing articles of claim 14, wherein said plastic is selected from the group consisting of polyvinyl chloride and polyolefin.

17. The aromatic and/or enticing baits of claim 14, wherein said plastic is in the form selected from the group consisting of fish-catching devices, feed baskets, buoyancy blocks for fish-catching nets, basic lead sheathings, blinker casings, spinner casings, twisters and parts thereof.

18. Method of luring fish, comprising placing a porous, thermoplastic treated with least one fish-luring aromatic and/or enticing substance in a body of water containing fish.
